

# LEADERSHIP IN ENERGY & ENVIRONMENTAL DESIGN (LEED)

Sound Seal prides itself in being a progressive company and our commitment to promoting environmentally friendly products. Our WoodTrends wood veneered wall & ceiling panel line offers various options to accommodate this progressive thinking. The use of veneer itself, although not available for a LEED point as of this writing, is the most environmentally friendly use of a tree. The use of veneer allows the greatest possible yield of useable wood from any given tree.

The possible credits for our WoodTrends panels are as follows:

- Credit MA 4.1 – 5% Recycled Content
- Credit MR 4.2 – 10% Recycled Content
- Credit MR 6 – Renewable Resources - Bamboo veneer, a rapidly renewable grass, is available on our WoodTrends panel
- Credit MR 7 – Certified Wood - Many of our available veneers are FSC certified
- Credit EQ 4.1 – Low-Emitting Materials - WoodTrends uses a latex based adhesive
- Credit EQ 4.4 – Low-Emitting Materials; Composite Wood - WoodTrends Panels are available with both a Class C & Class A fire rated MDF with no added urea-formaldehyde
